

SPECTRUM AEROMED INNOVATES DURING GLOBAL PANDEMIC

For nearly 30 years, Spectrum Aeromed has designed and developed air ambulance medical interiors for hospital programs, multi-mission charters, private operators, and military branches around the world. We also customize VIP emergency medical interior suites for executive aircraft and heads of state.

Understanding the ambulatory needs of air medical and patient transport crews has made Spectrum Aeromed synonymous with air life support solutions. From basic non-critical transport to life critical missions, our systems are as adaptable as the teams that use them.

As an essential service provider, we've continued to be open during the Covid-19 pandemic. Spectrum Aeromed works with a variety of isolation and containment units including AirBoss Iso-Pod and EpiGuards EpiShuttle. EpiShuttles are installed on our ITS Decks while other containment units can be installed on a stretcher. Our Units can be quickly installed and removed within 30 minutes due to our Adapter which attaches to the existing seat rails of an aircraft.

“We're proud to support saving lives.”

IsoPod on 20/2200 Series Module

EpiShuttle on Carbon Fiber PTU on Autoflug's Multibase

EpiShuttle on 2800 Series Module at FAI

AIRCRAFT AND STCs

Where you can Install an Isolation Unit
